

Fueling Trojan Athletes

casshealth.org

Fueling Wrestlers

Fueling Wrestlers Wrestling is a high-intensity sport that demands strength, power, and stamina. A high strength-to-weight ratio is desirable, leading some wrestlers to try to drop weight to fit into a lower weight class than is natural for their body type. For men, there are 11 age divisions, and for women there are 9 age divisions. Both men and women compete in weight classes, and there are many weight classes for each gender. Matches consist of 2 periods that range from 90 seconds to 3 minutes with a 30-second rest between periods.

Fueling Strategies

Wrestlers' energy (calorie) needs depend on age, gender, and the amount of time they spend training. Young wrestlers need to get enough calories and nutrients to support normal growth and development. Dehydration practices to make weight are prohibited under USA Wrestling rules. Wrestlers need to choose nutrient-rich foods while eating enough calories to maintain weight without gaining weight. The nutrients that provide energy are carbohydrate, protein, and fat. The amounts of each nutrient you need to fuel your practice and competition are given below.

Carbohydrate

Carbohydrate provides important fuel for working muscles. Try to eat 2.3 to 3.2 grams of carbohydrate per pound of body weight per day (5 to 7 grams per kilogram). For example, a 150-pound wrestler would need 345 to 480 grams of carbohydrate a day. On less intense training days or when sidelined by injury, you only need 1.4 to 2.3 grams of carbohydrate per pound (3 to 5 grams per kilogram).

Choose high-quality carbohydrate foods such as whole grain breads and cereals, rice, pasta, starchy vegetables, whole or dried fruit, and low-fat milk and yogurt. Eat fewer refined carbohydrates and sweets such as pastries, cookies, cakes, candy, sugar-sweetened soft drinks, fruit drinks, tea, or specialty coffee drinks.

These foods have 15 grams of carbohydrate:

- 1 slice bread
- 6-inch tortilla
- ½ cup corn
- ½ cup mashed potatoes
- ½ medium baked or sweet potato
- 1/3 cup rice
- 3 cups popcorn
- 1 small apple
- 15 grapes
- 2 tangerines
- 2 tablespoons raisins
- ½ cup orange juice
- 3 cups green beans
- 1¼ cups milk or yogurt

Protein

Protein provides the building blocks for muscle mass and for healthy growth and development. You need 0.6 to 0.8 grams of protein per pound of body weight (1.3 to 1.8 grams per kilogram). For example, a 150-pound wrestler would need 90 to 120 grams of protein a day. Eating more protein than the recommended amount will not build lean muscle mass faster. Timing protein intake around training will help support muscle development and aid recovery after practice or a match. (See "What Should Wrestlers Eat Before and After a Workout?")

Choose lean protein foods such as lean beef and pork, chicken, turkey, fish, whole eggs or egg whites, and low-fat dairy foods. Nuts are a good source of protein and contain healthy fats. Eat fewer high-fat protein foods such as regular burgers, brisket, ribs, sausage, and full fat cheeses and dairy foods.

These foods have 7 grams of protein:

- 1-ounce cheese
- 1-ounce beef, pork, chicken, turkey, or fish
- ¼ cup cottage cheese
- ½ cup black beans or kidney beans
- 1 whole egg
- 2 tablespoons peanut butter
- 1 cup milk or plain yogurt

Fats

There is no specific recommendation for fat for wrestlers, but healthy fats should be a part of every athlete's diet. Healthy fats include olives and olive oil, nuts and nut butters, avocado, and vegetable oil (such as canola oil). Fat contains more calories than carbohydrate or protein, so decreasing fat intake while trying to lose weight can be a useful strategy.

What Should Wrestlers Eat Before and After a Workout?

Wrestlers must weigh in on the day before the beginning of a competition and should consume a meal with easily digested and familiar foods before the match. When possible, eat 2 to 3 hours before a long training session or match. Aim for a low-fat meal with about 200 grams of carbohydrate and 30 grams of lean protein. This will ensure you have enough fuel on board but will leave time for your stomach to empty before you start training or competition. A turkey sub sandwich with baked chips and a side of fruit or a grilled chicken wrap on a flour tortilla with pretzels and fruit juice or fat-free milk are examples of meals that will meet the energy demands of practice or competition. Many wrestlers find that reducing dietary fiber intake prior to a match helps reduce bloating or fullness.

If there is not enough time to eat 3 to 4 hours before practice or competition, eat a snack 1 to 2 hours before exercise. Good choices include a mini bagel with peanut butter, granola or cereal bars, carbohydrate gel or chews, cereal and milk with a small banana, or yogurt. If there is less than an hour before exercise, a sports drink or a low-fat liquid meal replacement is a good choice because liquids leave the stomach faster than solid foods.

For training sessions longer than 1 to 2 hours, keep your energy level high by eating 25 to 30 grams of carbohydrate every hour. Good choices for snacks include sports drinks, which provide carbohydrate, fluids, sodium, and potassium; energy gels or chews with water; a mini bagel; or an energy bar.

After practice, recover with a carbohydrate and protein-rich snack. Carbohydrate replaces muscle glycogen (carbohydrate stored in muscles) that was lost during a long training session, and protein stimulates muscle protein repair. Good choices include a turkey or grilled chicken sandwich, a slice of vegetable-cheese pizza, low-fat chocolate milk, cottage cheese and fruit, or cheese and crackers. If you are practicing or competing the next day, start your recovery within 30 minutes after training. If the following day will be a rest day, add recovery foods to your next meal.

Vitamins and Minerals

Wrestlers can get all the vitamins and minerals they need by making healthy food choices and eating a variety of foods. Have at least 5 servings of fruits and vegetables each day. Adding berries to breakfast cereal, dried fruit to trail mix, frozen fruit to plain or vanilla yogurt, side salads with meals, vegetables on sandwiches, and salsa on baked potatoes and snacking on fresh fruits and vegetables will help you get all the nutrients you need.

Female wrestlers should pay extra attention to choosing iron-rich and calcium-rich foods. These nutrients are needed in larger amounts, especially during teen years. Lean beef in a stir-fry, dark meat chicken or turkey, kidney beans and black beans, and breakfast cereals fortified with iron are good choices. For calcium, choose low-fat milk (cow's milk or soy, rice, or almond milk), low-fat cheese, yogurt, almonds, leafy green vegetables, orange juice with added calcium, or smoothies made with milk or yogurt.

Hydration Strategies: What Should Wrestlers Drink?

Intentional dehydration is dangerous to your health. Wrestlers have died from extreme dehydration while attempting to lose weight prior to a weigh-in. USA Wrestling has instituted rules to help safeguard wrestlers, especially by holding weigh-ins the day before competition instead of the day of the competition. However, some wrestlers still practice extreme dieting and dehydration to make weight. USA Wrestling prohibits the following dehydration practices: hot rooms, saunas, steam rooms, rubber suits, diuretics, emetics, laxatives, and self-induced vomiting. Dehydration impairs your performance and can be deadly.

Water is best for most athletes. Drink about 2 cups (16 ounces) of water 2 to 3 hours before training or competition. Then drink 1 cup (8 ounces) of water 10 to 20 minutes before beginning to practice. If your training session is long, drink about ½ cup of fluid every 10 to 20 minutes during exercise.

Sports drinks, regular or "lighter" versions with half the calories but with the same amount of electrolytes, are good choices when you have long, hard training sessions and need extra carbohydrate for fuel. Stick to the tried-and-true sports drinks such as Gatorade or PowerAde, because they provide a good balance of carbohydrate, sodium, and potassium to replace losses. Follow the same drinking schedule as for water, but also listen to your body. Drink when you are thirsty and monitor how much you urinate and the color of your urine. If you are urinating frequently throughout the day and your urine is a light-straw color, you are probably drinking enough fluids.

Frequently Asked Questions

What are the best foods to eat after a weigh-in and before a competition?

Choose easy-to-digest foods that you know won't upset your stomach. Applesauce, canned fruit, bananas, yogurt, pasta with marinara sauce, grilled or baked meats (chicken breast, turkey, or pork tenderloin), eggs, rice, mashed potatoes, green beans, steamed carrots, and bread, rolls, or crackers will provide enough carbohydrate and protein to fuel you through the competition. This is also a good time to make sure you are adequately hydrated. Drink water, 100% fruit juice, or sports drinks with meals so you are well hydrated for the match.

What is the best way to lose weight to get into a lower weight class?

Young wrestlers should talk to their coach and parents about what weight class is best for their age and body type. If it is safe to compete in a lower weight class, lose weight slowly in the offseason instead of cutting weight during the season. To maintain strength and power, you need enough calories, so restricting calories during the season is counterproductive to performance.

What are some good resources for nutrition and wrestling?

The best resource is a registered dietitian nutritionist, especially one who specializes in sports nutrition.

Information from the Academy of Nutrition and Dietetics Nutrition Care Manual.

Food Basics

The Basics

- Eat breakfast every day.
- Drink plenty of water.
- Eat five servings of fruits & veggies.
- Eat lean protein with meals and snacks.
- Choose foods that help you feel your best.
- Tune into your body's cues for when you're thirsty, hungry, and full. Respect your body by meeting its needs.
- Plan ahead for meals and snacks.

Parent's or Caregiver's Role

- Choose and purchase the food.
- Provide regular meals with snacks.
- Eat together as often as possible.
- Encourage cooking and preparing food together.

Athlete's Role

- Choose if they are going to eat.
- Determine how much to eat.
- Stop eating when they are full.
- Decide how fast/slow they will eat.

Hydration

Staying hydrated is a key ingredient to keeping your body healthy and safe during intense exercise. Dehydration can increase your risk of injury or cause serious heat illnesses.

WATER BASICS

- ✓ Check your urine and aim for clear to light yellow.
- ✓ If you're thirsty, you're already dehydrated.
- ✓ Aim for 80-120 ounces of fluid each day, or 1/2 to 1 ounce per pound of body weight
- ✓ Drink 8-12 ounces of water every 20 minutes during activity
- ✓ Don't over do it.

WHEN TO CONSIDER A SPORTS DRINK

- ✓ Exercise is longer than an hour
- ✓ Intense workouts
- ✓ Practicing or playing in high humidity & heat
- ✓ Excessive sweating

WARNING SIGNS OF DEHYDRATION

- Intense thirst
- Exhaustion
- Increased temperature
- Fast heart rate
- Fast breathing
- Confusion
- Fainting or feeling dizzy
- Cramping
- Headaches
- Dark urine

Calories: How much should an athlete eat?

Active teenagers need lots of fuel to get them through the day. On average ...

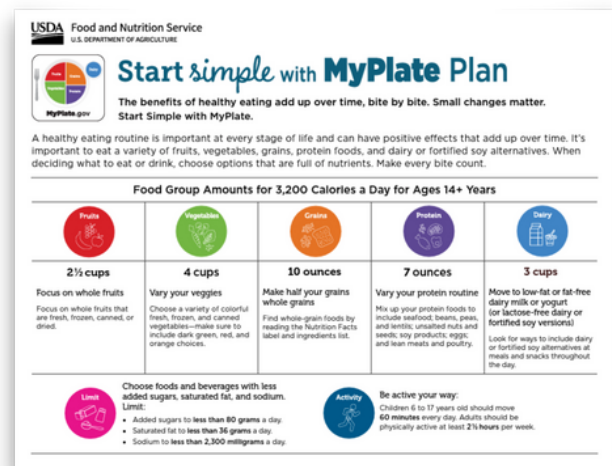

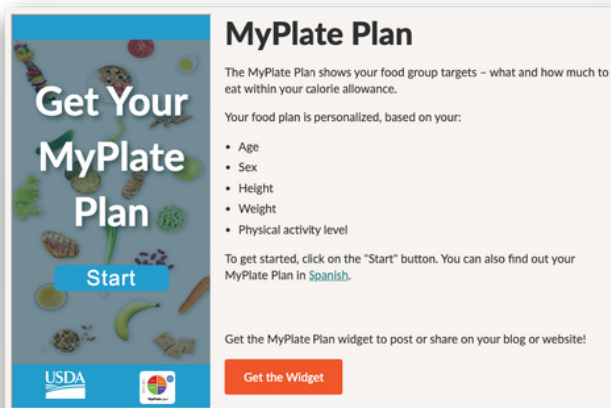

- Boys need 3,000 to 4,000 calories a day.
- Girls need 2,400 to 3,000 calories a day.

Teen athletes benefit from eating regularly (every few hours) and incorporating a mix of carbohydrates, fats, and protein every time they eat.

MyPlate Plans

For a more personalized plan, we recommend using the tools on MyPlate.gov. With their planning tool, you'll enter your age, sex, weight, height, and level of physical activity. A food plan will then be calculated that you can view online or download and print. It's important to remember that every body is different and you may need more calories on very active days, and less on other days. The MyPlate Plan is a great starting point and should be used along with your own body's needs and hunger cues.

- Start at myplate.gov/myplate-plan.
- Click on **Start**.
- Enter your age, sex, weight, height, and level of physical activity.
- Click **Calculate food plan**.
- Click on the calorie amount calculated to view and then download a MyPlate plan for that amount of daily calories.

How Teen Athletes Can Build Muscles with Protein

Article from eatright.org — Academy of Nutrition and Dietetics

Eating protein doesn't equal big muscles. Instead, muscle growth is a complex process that relies on adequate consumption of protein and calories, hormones the body produces, including human growth hormone and testosterone, and a healthy dose of physical activity. Here are a few facts and tips to keep in mind before you amp up your protein in search of a new physique.

Work Builds Muscle

Although eating protein doesn't build muscle on its own, the presence of protein in an athlete's eating pattern is important. Believe it or not, when you exercise, such as lifting weights or running, some of your muscle cells break down. Protein from food helps repair this damage from exercising and builds up more muscle, making them stronger.

Strike a Balance

While protein is important for building new muscles, **eating the right amount of protein** [and at the right time] **is key**. Consuming more protein than your body needs may translate to excess calories that must be stored, usually in the form of fat. Too little protein consumption means your body has to supply it itself, which can result in muscle breakdown and loss. When you eat a balanced diet that includes enough calories and carbohydrates, your body won't use protein as a calorie source — it will spare it to build muscles and repair them when needed.

How Much Protein Is Enough?

Young athletes need slightly more protein than their peers who aren't athletes. Protein needs are based on age, sex, body weight and stage of development, with teens needing between 10 to 30% of their daily calories from protein. Although an individual's exact needs will vary, the Recommended Dietary Allowance (RDA) provides a good reference for how much of a certain nutrient a healthy individual needs in a day. The RDA for protein is 46 grams for teenage girls and 52 grams for teenage boys per day.

Most athletes are able to meet these protein requirements and then some. In fact, studies show that young athletes consume two to three times the RDA for protein! Although athletes may have higher protein needs than their peers, contrary to popular belief, consuming large amounts of protein does not build additional muscle.

One strategy that may provide an advantage, though, focuses on timing. Studies now show that it is not just the total protein intake for the day that counts for athletes. The body can best build and maintain muscles when protein is divided relatively evenly throughout the day. To do this, include a source of protein at each meal and snack. [Our Athletic Trainer recommends about 20g of protein within 30 minutes post-exercise.]

The Best Protein Sources

Many foods contain protein, but high-quality protein comes from beef, poultry, fish, eggs, milk and dairy products, soy and soy products. Including a variety of plant-based sources of protein, such as beans, nuts, and seeds throughout the day can also help to meet protein requirements.

Beware of Protein Supplements

Some athletes wonder about using a protein supplement such as protein powder or a high-protein drink. Overall, this isn't necessary and even might be dangerous. Using protein supplements may lead to excessive protein intake, taxing the kidneys and promoting dehydration. Plus, the risk for contamination with steroids, hormones or other unwanted ingredients is real, as the safety of dietary supplements is largely left to manufacturers.

The good news? You can meet your protein needs with food alone! Just be sure to eat a serving of protein, like the ones above, at each meal and snack.

Foods that Fuel

Lean Meats

- Boneless chicken breast*
- Fish (cod, salmon, tuna)*
- Lean beef (steak, burger)*
- Turkey*
- Pork*
- Eggs or egg whites*

Dairy

- Low-fat milk*
- Low-fat yogurt*
- Greek yogurt*
- Cheese*
- Low-fat cottage cheese*

Grains

- Whole wheat or whole grain bread items like bagels, tortillas, pitas, English muffins
- Oatmeal*
- Whole grain pasta
- Whole wheat crackers
- Brown rice
- Quinoa*
- Whole wheat or whole grain cereals

Beans, Nuts & Seeds

- Edamame*
- Black beans*
- Chickpeas*
- Lentils*
- Nuts and seeds*
- Tofu*
- Nut butters*

How much protein do I need to eat?

For very active teens who are looking to build muscle mass, aim for 1/2 to 1 gram of protein per pound of body weight.

*Foods that are good sources of protein.

Fruits & Vegetables

- | | | | |
|-------------------|---------------|--------------------------|------------------|
| • Apples | • Carrots | • Lettuce, spinach, kale | • Sweet potatoes |
| • Apricots | • Cauliflower | • Oranges | • Tomatoes |
| • Avocados | • Celery | • Peaches | • Watermelon |
| • Bananas | • Cherries | • Pears | • Zucchini |
| • Berries | • Corn | • Peppers | |
| • Broccoli | • Cucumbers | • Pineapple | |
| • Brussel sprouts | • Grapes | • Plums | |
| • Cantaloupe | • Green beans | • Potatoes | |

Smoothies: A Great On-the-Go Option

Start with a cup of liquid like water or milk...

- Add a cup of frozen fruit you like, such as:
 - Blueberries, strawberries, or blackberries
 - Banana
 - Mango
 - Peaches
- Consider adding healthy fats like avocado, peanut butter, or almond butter.
- Consider adding in a vegetable like spinach, kale, tomato, or carrot.
- Blend together, adding ice or liquid as needed.

Ideas for Items to Have on Hand

- Chicken salad
- Egg salad
- Pre-made sandwiches
- Beef or turkey sticks
- Tuna packets
- Premade salads
- Peanut butter

Snack Ideas for Busy Days (Perfect for a backpack!)

- 100% juice boxes
- Trail mix
- Peanut butter crackers
- Granola bars
- Dried fruit
- Applesauce pouches
- Almonds
- Peanuts
- Cashews

Healthy Snacks to Refuel

The best sports recovery snack choices for youth athletes are the foods that they are familiar with and that they tolerate. Serving a combination of carbohydrate-rich foods with protein will help prevent muscle soreness and prepare your child for their next practice or competition. A meal or snack will also help youth athletes to refuel and rehydrate their body after intense activity. Healthy snack combinations include the following:

$\frac{3}{4}$ cup low-fat yogurt +
 $\frac{1}{2}$ cup granola +
 $\frac{3}{4}$ cup frozen peaches

Trail mix made with:
1 ounce beef jerky +
1 ounce dried pineapple +
 $\frac{1}{2}$ cup ready-to-eat cereal

1 cup low-fat chocolate milk +
8 graham crackers

1 apple +
2 tablespoons of
peanut butter

12 whole wheat tortilla chips +
 $\frac{1}{2}$ cup black bean and corn salsa

1 cup ready-to-eat cereal +
1 cup low-fat milk

1 ounce pretzels +
1 ounce raisins

6 wheat crackers +
1 ounce summer sausage +
1 ounce low-fat cheese

1 fruit and nut granola bar +
3 ounce applesauce pouch

Fruit smoothie made with
 $\frac{3}{4}$ cup low-fat yogurt +
1 small banana
 $\frac{1}{2}$ cup low-fat milk

12 wheat crackers +
 $\frac{1}{4}$ cup avocado +
1 low-fat mozzarella string cheese

1 mini bagel +
2 tablespoons cream cheese +
1 cup low-fat milk

$\frac{1}{2}$ cup cooked oatmeal +
1 cup blueberries +
2 tablespoons nuts

1 whole wheat English muffin +
2 tablespoons peanut butter +
1 tablespoon fruit preserves

2 tablespoons hummus +
1 cup raw veggies such as carrots,
broccoli, cauliflower

1 medium orange +
1 hard-boiled egg

6 wheat crackers +
 $\frac{1}{3}$ cup tuna salad

1 eight-inch tortilla +
2 ounces sliced turkey

Information from the Academy of Nutrition and Dietetics Nutrition Care Manual

Building Good Habits

In addition to good nutrition habits, athletes also need to develop good habits for recovery in between practices and competition.

Sleep

- Aim for 8 hours of sleep every night to help your body recover from practices and competition.
- Create a healthy routine each night to help yourself fall asleep.
 - Turn off electronics like phones, laptops, and TVs a half hour to hour before bed.
 - Use the time before bed for self-care like stretching, journaling, or reading.
 - Stick to a regular bedtime and wake-up time.
 - Avoid or cut back on caffeine.

Cool-Downs, Massage, & Stretching

- Don't skip the cool down at the end of a workout.
- Use a foam roller or tennis ball to massage muscles.
- Stretching — both static and dynamic — can help you reduce soreness and may help prevent injuries.
- Keep ice packs (or bags of frozen peas) on hand. When needed, apply the ice for 20 minutes at a time.
 - You can also make an ice pack by mixing one cup of rubbing alcohol with three cups of water and freezing in a plastic freezer bag.

MEAL PLANNING TIPS

- Start by checking the refrigerator, freezer, and pantry to see what you already have on hand.
- Look at the calendar and determine when and where you'll eat your meals, and make note of any special events or considerations that you'll need to plan around.
- Check out the weekly grocery ads to see what's on sale and in season.
- Review your meals and see if there is something from each of the food groups in most of your meals. This is the simplest way to make sure your meals are healthy.
- If you have extra room in your grocery budget, try to stock up on the pantry items you use regularly.

What do I already have at home?
